

Browning-Ferris Industries Solid Waste Facilities Permit Application
#19-AA-2000
Sunshine Canyon Landfill, Hearing March 25, 2008,
Granada Hills, CA

Dear CIWMB Staff:

If you buy BFI's story that they are running out of space in the City and that is why they are applying now for a permit for a combined City/County landfill, then I have some swamp land in Florida that I want to sell you.

The City gave them 55 million tons on the cityside within cells "A", "B" and "C". So what do they do? They stockpile soil on "C" cell so they can't use it and then claim that they are concerned that moving it would cause dust which might harm us. They already cause dust and they don't seem all that concerned about stopping it. For instance like shutting down as soon as it gets windy or doing something about putting trees or grass on the bare slopes.

You and I know the real reason for their application. That it would cost them money to move the dirt. So let's see..... If they caused the problem by storing the soil in the wrong place when they knew that they would have to go into that area next, and if the only reason that they don't want to move it is money..... then the only question here is why are you, the California Integrated Waste Management Board, pandering to them now?

Sincerely,

17435 SAN FERNANDO MISSION BLVD.
